EDUCATION

TOBB University of Economics and Technology

Computer Science

Expected: Aug 2026

Ankara

WORK EXPERIENCE

Inovat Mühendislik Sanayi Ticaret A.Ş.

Software Engineering Intern

May 2026 - Aug 2026 (Ongoing)

Ankara

- Developed a weather prediction AI for long-term weather conditions at given coordinates.
- Currently working on an energy production prediction AI that uses forecasted weather conditions to predict energy production for a given location.

Dinomore Games

Game Developer Intern

May 2025 - Aug 2025

Ankara

- Led the technical development of "Voltline", a puzzle game successfully published on the Nintendo eShop and PlayStation Store.
- Managed the complete production cycle and architected all systems within a demanding 3-month window using C# and Unity.
- Rebuilt the UI and reworked core gameplay for "LogIQ Boost", redesigned all menu/HUD screens, and updated the art style.

Moralabs

Game Developer Intern

Sep 2024 - Dec 2024

Ankara

- Took over an in-progress codebase for "Twins & Dreams" and shipped it to release on Steam and mobile, implementing a new PC input system, new level mechanics, and refactoring the codebase for maintainability.
- Built a cross-platform achievements system with Steam and mobile platform SDK integration.
- Redesigned 50 levels for smoother difficulty progression and resolved release-blocking issues including unsolvable levels, broken progression, and character movement bugs.
- Designed and developed interactive playable ads for "Miss Katy: Royal Detective" using Cocos Creator and TypeScript, enhancing user acquisition strategies.

PROJECTS

[Voltline](#)

- A relaxing puzzle game I developed during my summer internship at Dinomore Games with Unity and C#. **Successful release** on Nintendo eShop and PlayStation Store.

[Grid3](#)

- A 2D game built with Unity and C# as a case study for Dinomore Games. The game is about understanding multiple games within a single game mechanic, and the graphics are not the main focus.

[Stick & Steal](#)

- A 2D hyper-casual game built with Unity & C#, featuring a physics-based extendable arm mechanic with raycast collision detection, dynamic multi-segment rendering, audio management, and a full menu/UI flow.

[Intelligent Traffic Simulator - Graduation Project](#)

- Designed and implemented an AI-powered traffic intersection simulator that combines PPO reinforcement learning, SUMO traffic simulation, and real-time web visualization; achieved a 15% throughput improvement and <50ms inference latency with a full-stack architecture.

ACTIVITIES

TOBB ETU Tennis Team Member

2023

SKILLS & INTERESTS

- **Technologies:** Unity, C#, React, Java, JavaScript, Python, HTML/CSS, Tailwind CSS, SQL
- **Skills:** OOP, Software Architecture, Performance Optimization, Project Ownership, Rapid Prototyping, UI/UX Principles
- **Languages:** Turkish (Native), English (Fluent), Spanish (Beginner)
- **Interests:** Tennis, Game Development, Cats, Cooking, Content Creation
